APP PRESENTATION · KIN STUDIOS

Let's Do Lunch

The delivery app for a menu that changes every week.

What we're building

Lunch, dinner, catering

Hot, fresh lunches, family-style dinners and catering for every occasion, in San Antonio.

Delivered

Deliveries begin at 10:45 AM with a 3-plate minimum. Order by 4 PM daily.

A new menu weekly

This week: Menudo, BBQ Chicken Po'Boy and Smoked Turkey Leg over Mac & Cheese.

WOMEN OWNED · LOCAL BUSINESS · COMMUNITY DRIVEN

Why an app

	Today	With the app
Menu	A new flyer every week	This week's specials open on Home
Ordering	Call, text or DM	Pick a size, add to the bag
Delivery	3 plates or more, by text	Live 3-plate counter and delivery windows
Paying	Cash App or cash	In the app, or Cash App and cash
Updates	Facebook posts	Push notifications, three a week at most

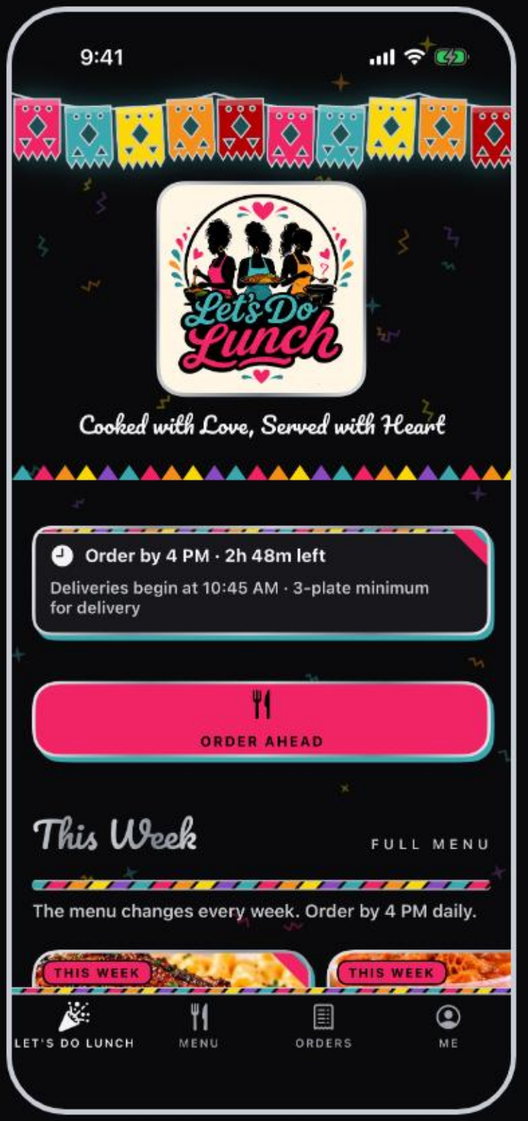

The look: Noche

- Black ground with silver lining, like a 90s hoops jersey
- Fiesta colors from their logo: hot pink, teal and orange as color-block stripes
- Papel picado garlands that glow against the black
- Their logo on a cream plate, so the silhouettes stay readable
- A cream daytime theme, Dia, is built too

Home: this week, up front

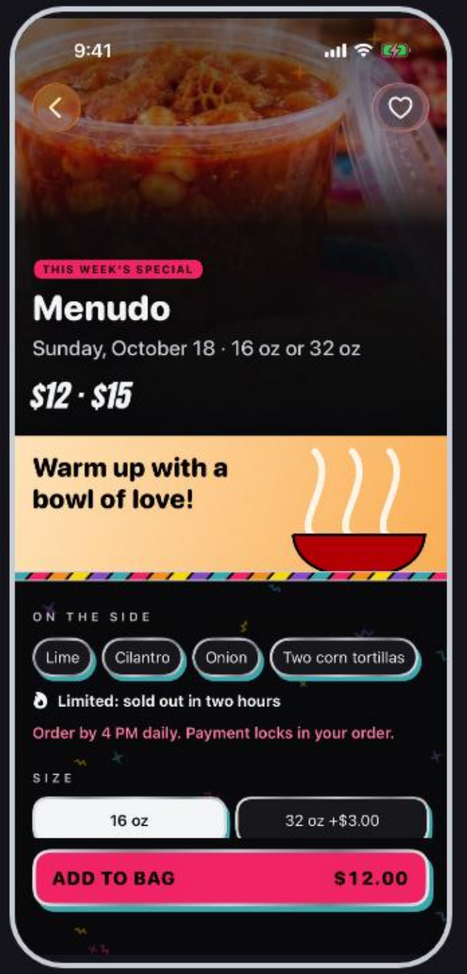

- This week's specials, each with its day
- A live order-by-4 PM countdown
- "The menu changes every week" in the app's own words
- One big button to order ahead

The weekly menu

- Menudo: 16 oz $12 or 32 oz $15, picked in one tap
- A Limited badge, from their own line: sold out in two hours
- Every special wears its own flyer-style header: football, cozy or smoky
- Past favorites sit below with their last-printed prices

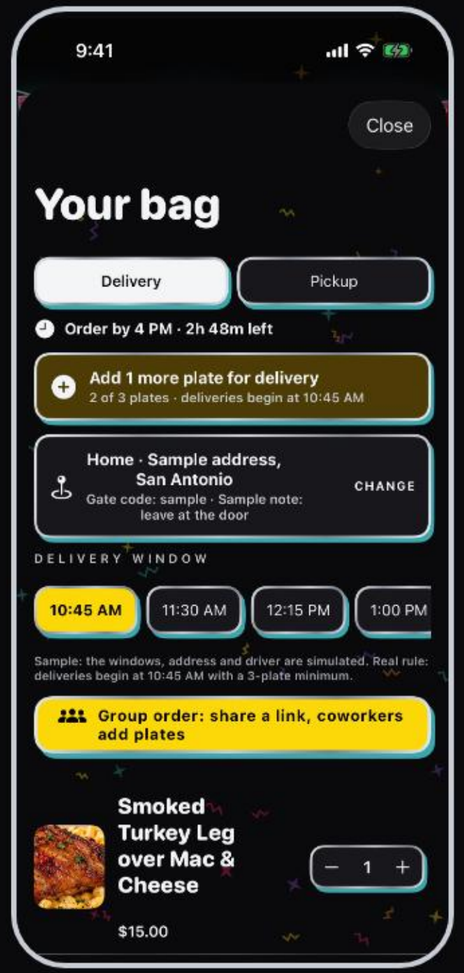

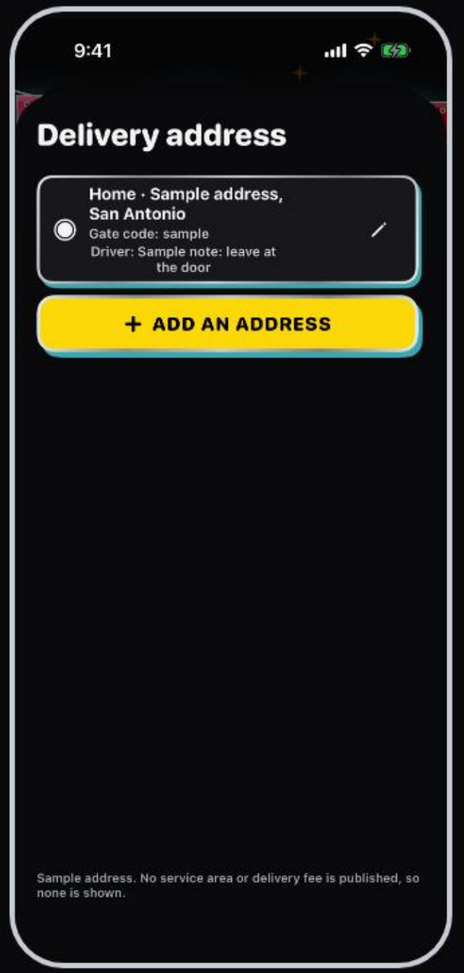

Delivery, built in

- Delivery or pickup at the top of the bag
- A live counter: add 1 more plate until the 3-plate minimum is met
- Delivery windows from 10:45 AM, with the order-by-4 PM countdown
- Saved addresses with gate details and notes to the driver

The address, windows and driver notes shown are simulated.

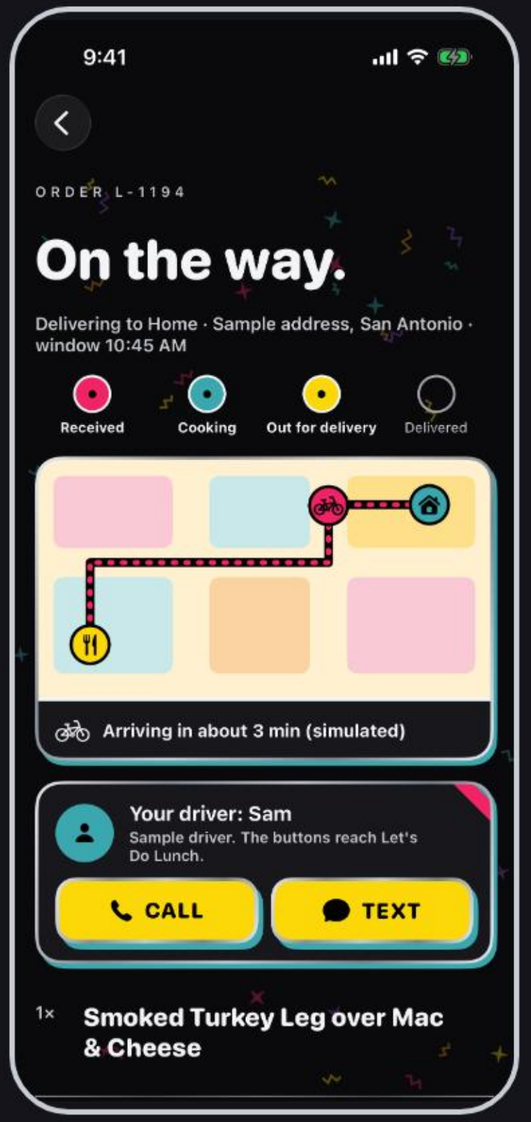

Live delivery tracker

- Four steps: Received, Cooking, Out for delivery, Delivered
- A map with a moving driver pin and an arrival time
- Call and Text buttons for the driver
- A delivered confirmation and a rate-your-meal prompt

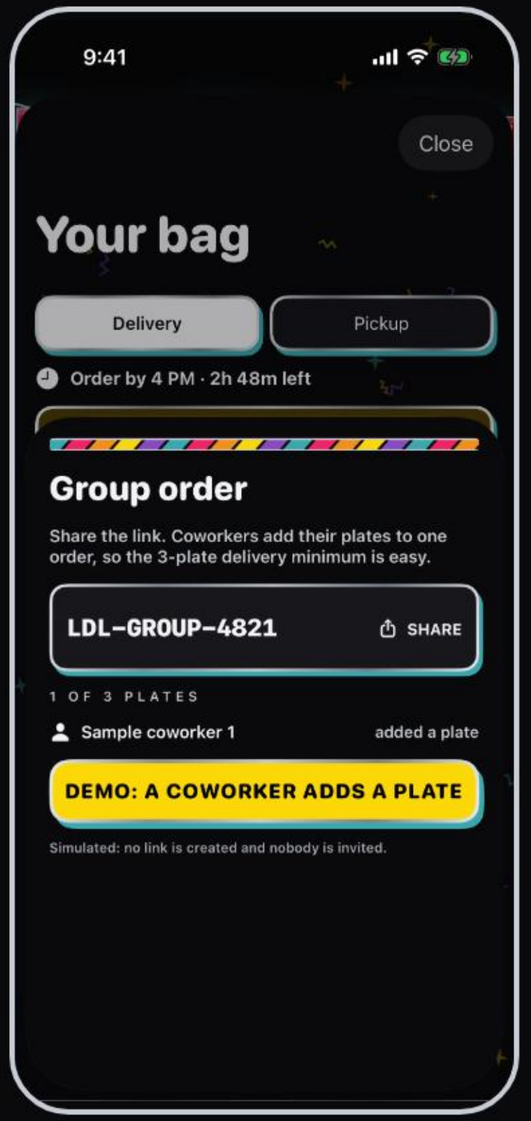

Driver name, map and arrival time are simulated in this demo.

Group orders for the office

- Share one link; coworkers add their own plates to the same order
- Three plates together unlocks delivery
- One bag, one payment, one delivery to the door

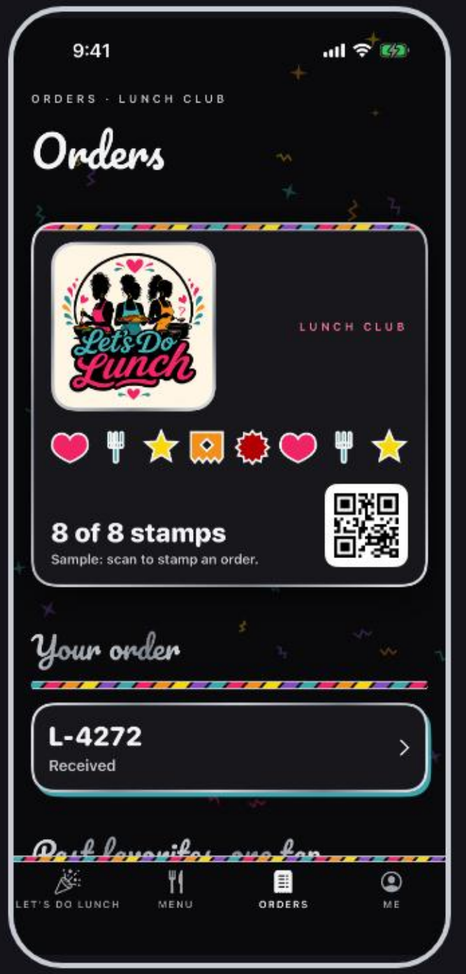

The link and the coworker shown are simulated.

Lunch Club and Me

- A stamp card with fiesta shapes, redeemed at checkout
- Order history with one-tap Reorder and Past favorites
- Saved addresses and notification choices
- Call or text 726-249-4503 and their Facebook page, one tap away

The stamp card is a sample of how rewards could work.

The weekly notification rhythm

When	Message (example)	Job
Sunday, 6 PM	“This week’s menu is up. Lock in your orders today!”	The weekly drop
Day before, 10 AM	“Tomorrow: BBQ Chicken Po’Boy, $12. Order by 4 PM.”	The nudge
Day of, 1 PM	“Last call. Menudo sold out in two hours last time.”	The deadline

Three pushes a week at most, never more than one in a day, quiet hours 8 PM to 8 AM. The owner approves every message. Example wording uses their own flyer lines.

How people find the app

QR on every flyer

Beside the Cash App code, with “Order in the app” in the caption.

Facebook first

A pinned post and a short owner video that shows an order start to finish.

Offices and streets

The 3-plate minimum is a built-in group order: coworkers and neighbors order together.

Search

A free Google Business Profile and the website carry the same weekly menu.

Honest sizing: about 163 Facebook followers today. The app keeps and speeds up the customers they already have; growth comes from the channels above.

The menu that changes every week

Today

- The app's menu is built from one data file
- Each weekly change is an update we make: edit, rebuild, publish in minutes
- The website already works from one file the owner can edit

Next

- One simple form for the owner: name, price, sizes, day, photo, sold-out and limit
- The app and the website read the same weekly menu
- A push composer for the weekly drop

What we need to launch

From the owner

- The original logo file
- Real photos of the food
- A street address, or “delivery only” wording
- Hours, delivery fee and service area
- An email, and approval of the push messages
- A payment processor for in-app payment
